Important:

Do not pre-mix concentrated nutrients.

Fill the reservoir with water & then add nutrients.

Always mix Cali-Pro A with fresh water first, then add Cali-Pro B.

Ideal water temp is 60–72°F (16–22°C).

Ideal pH range after mixing nutrients is 5.8–6.3.

Monitor plants for signs of stress when following a more aggressive feeding program.

Notes:

PH UP
Premium pH Alkalizer

PH DOWN
Premium pH Acidifier

Apply to the nutrient solution just a little at a time, testing the pH periodically until the readings are in the desired range.

CAL-MAG
Calcium-Magnesium

STURDY STALK
Potassium Silicate

0.5-1.25 mL per liter

Use when needed from early vegetative through late flowering phase. Recommended for use on water days only.
Do not use Cal-Mag and Sturdy Stalk in the same watering.
